The second part of the paper is devoted to the study of the asymptotic behavior of the solutions of the problem (1.1)–(1.3) as $\epsilon \rightarrow 0$. In the case of a smooth domain Ω , the asymptotic expansion of the solution is obtained in the form of a series in powers of ϵ . In the case of a domain with a re-entrant corner, the asymptotic expansion is obtained in the form of a series in powers of ϵ and a series in powers of $\epsilon^{1/2}$. The asymptotic expansion of the solution is obtained in the form of a series in powers of ϵ and a series in powers of $\epsilon^{1/2}$. The asymptotic expansion of the solution is obtained in the form of a series in powers of ϵ and a series in powers of $\epsilon^{1/2}$.
