[illegible][illegible]

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand what customers want and what problems they are trying to solve. Once a need is identified, the next step is to develop a concept that addresses that need. This is often done through brainstorming and sketching ideas. The third step is to create a prototype, which is a preliminary model of the product. This allows the designer to test the concept and make any necessary adjustments. Finally, the product is manufactured and distributed to the market. Throughout this process, it is important to keep the customer in mind and to iterate on the design as needed.
